POT ROOTS

Pot roots are small clumps, or individual roots, which have been grown in three inch pots. As a planting unit, they are planted and perform, similarly to roots. They are especially suited for early southern plantings. In spite of their meager size, they have vigor and vitality which often surpasses that of field grown roots. Invariably, they produce a better clump of roots the following fall than do field grown roots, especially if the latter are large when planted.
